TRACK 2 / THE AGENT THAT CAN EXPLAIN WHY

TraceHarbor

One shipment.
Four conflicting stories.

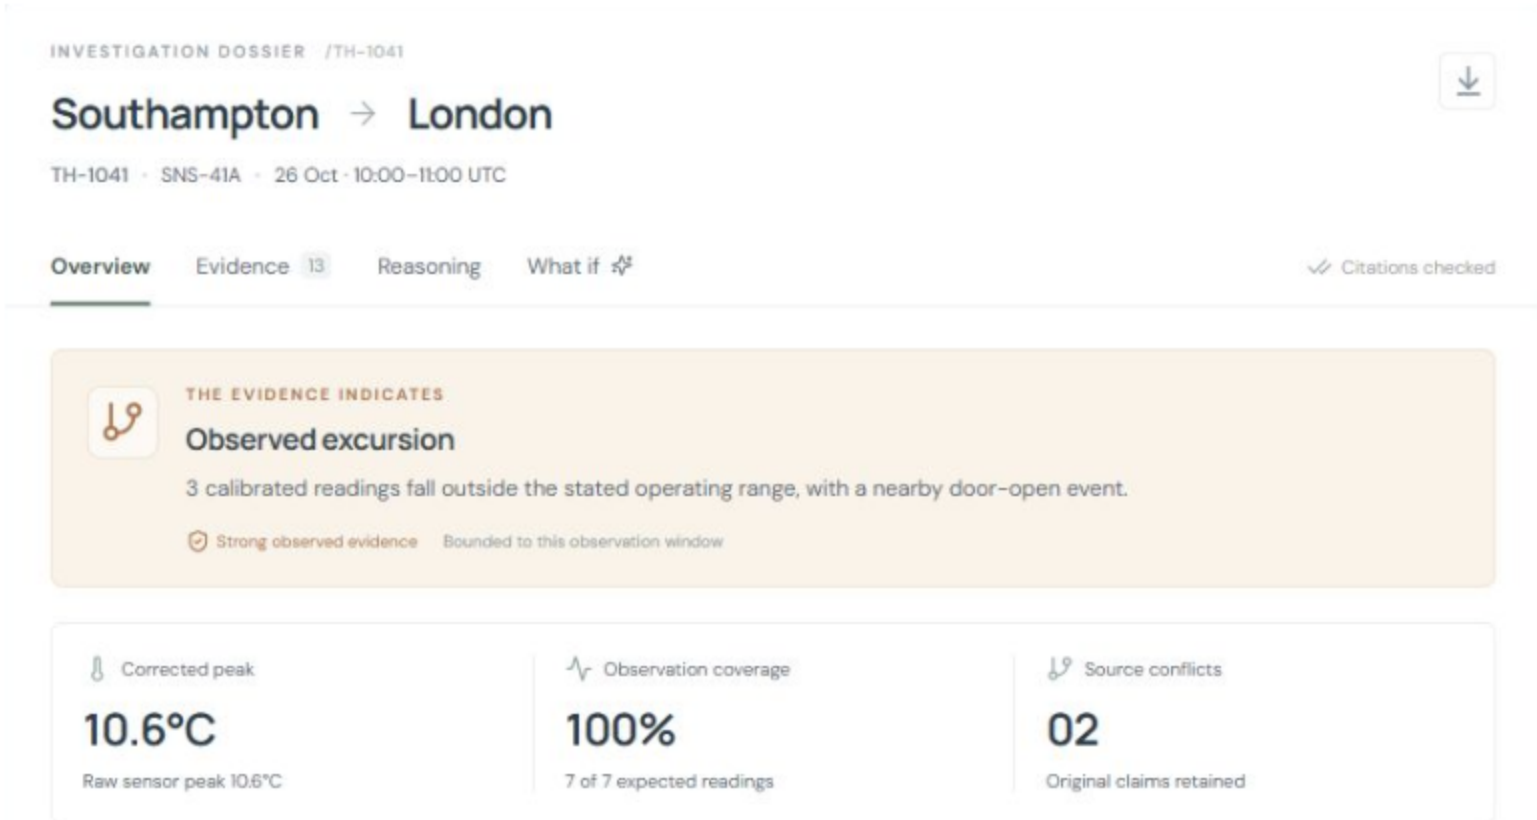

An operations analyst needs a defensible explanation
for a disputed cold-chain temperature exception.

MANIFEST / TELEMETRY / INCIDENTS / CALIBRATION

A dossier the operator can inspect

Findings cite the records.
Conflicts stay visible.
Missing evidence stays missing.

The next action belongs to the human operator.

The critic has a concrete job

01	**Plan retrieval**	Manifest + telemetry leave the case unresolved.
02	**Read and reconcile**	Consume governed rows through World Model context.
03	**Retrieve missing evidence**	Critic requests incidents + calibration from Zetaris.
04	**Recompute and challenge**	Sensor bias; withholding calibration restores abstention.

VERIFIED LIVE: 3 MODEL CALLS / 4 SQL READS / 46 EVIDENCE RECORDS

Two ways to run the same evidence core

PUBLIC SAMPLE

React + Vite
Firebase Hosting
Synthetic source records
Local deterministic computation

traceharbor.web.app

LOCAL LIVE COMPANION

Node.js structured runner
Zetaris REST + semantic layer
Official Meterless World Model
Nightshift model requests

Private service credentials stay server-side.

Receipts determine what we claim

Technology	Role	Verified state
Meterless World Model	Evidence state and provenance	Local feature test + 8/8 conformance
Zetaris	Four feeds, USL, data quality	Actual queries and DQ verified
Meterless Nightshift	Primary live model route	Three live model calls verified
NVIDIA (optional)	No current contribution claimed	Not used: local Llama path

Codex assisted implementation. Cursor usage is not claimed.

Withhold evidence. Test the answer.

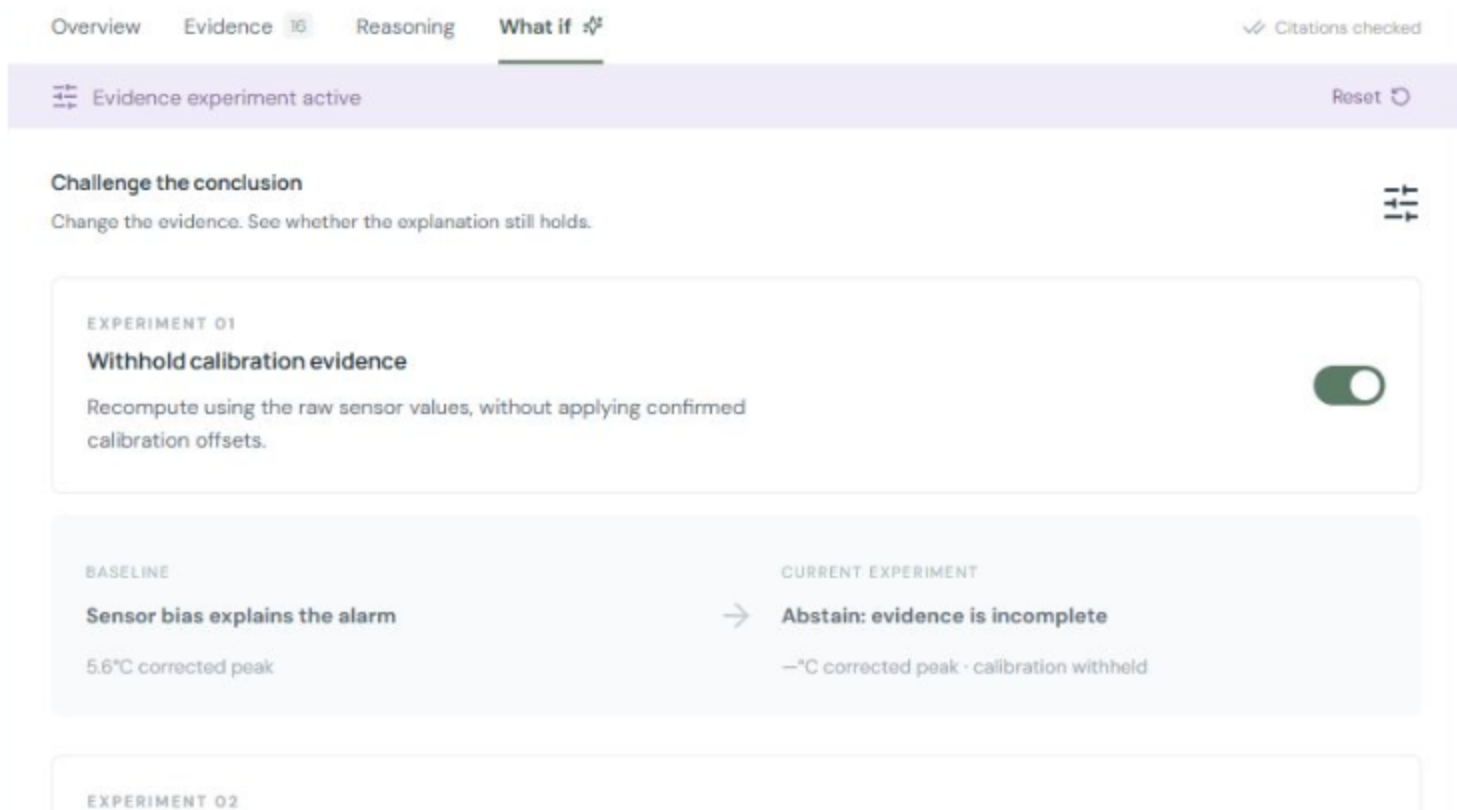

TH-1042

Calibration available

Sensor bias explains the alarm.

Calibration withheld

Abstain: evidence is incomplete.

Different records produce different conclusions

Synthetic case	What the evidence tests	Computed result
TH-1041	Calibrated peaks + conflicting claims	Observed excursion
TH-1042	Valid offset + agreeing reference	Sensor bias
TH-1043	Missing observations + uncertain calibration	Insufficient evidence
TH-1044	Complete bounded observations	Within observed range

16 local tests passed

8 / 8 upstream engine checks passed

Make the explanation useful in real operations

01 Validate more unseen cases
02 Validate with an operations analyst
03 Time a fair manual-versus-assisted study

Synthetic evidence today. No measured savings,
causal proof, release approval or safety certification.
